Summary

Final-year Computer Science student specializing in full-stack web development and LLM application design. Experience building with TypeScript, React, Next.js, FastAPI, and PostgreSQL. Strong focus on type safety, monorepo architectures, and asynchronous backend communication.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React, Next.js, Tailwind CSS, Shadcn UI, TanStack Query, React Flow

Backend: Node.js, Express, FastAPI, REST APIs, Server-Sent Events (SSE)

Databases: PostgreSQL, MongoDB, SQLModel, Mongoose

Tooling & Core: Git, Linux, Docker, Monorepos, Zod, JWT Authentication, Groq LLM

Selected Projects

DevPlanner (AI-Powered Project Planner) | *Next.js, FastAPI, PostgreSQL, Groq, React Flow*

[GitHub](#)

- Built an autonomous orchestration system utilizing a 3-agent LLM framework to generate comprehensive product requirements and technical architecture directly from text prompts.
- Implemented an asynchronous streaming backend with FastAPI and PostgreSQL using Server-Sent Events (SSE) to provide real-time agent execution status updates.
- Designed an interactive directed acyclic graph (DAG) visualization using React Flow and Dagre, rendering dynamic project timelines and task dependencies natively in the browser.

WorkforceHub (Enterprise HRMS) | *TypeScript, React, Node.js, Express, MongoDB, Zod*

[GitHub](#)

- Developed a full-stack human resource management platform managed inside a unified TypeScript monorepo setup.
- Eliminated redundant verification logic by engineering a shared Zod schema package utilized across both the client application and Express API endpoints.
- Optimized data fetching using TanStack Query for optimistic state updates, reducing average interface loading state occurrences during database mutations.

My Game Den (Gaming Hub & Tier Lists) | *React, Express.js, MongoDB, IGDB API*

[Live Site](#) | [GitHub](#)

- Created a dynamic media discovery web application featuring stateful tier-list creation engines backed by persistent user databases.
- Integrated IGDB's query API with client-side caching routines to deliver instant multi-parameter searches over large datasets.
- Implemented intuitive drag-and-drop mechanics using `@dnd-kit` and secured application state management utilizing custom verification middleware and standard JWT handling.

Education

Sreyas Institute of Engineering and Technology

Hyderabad, India

Bachelor of Technology in Computer Science and Engineering (CGPA: 9.27)

Expected: May 2026

Leadership & Activities

Head, College Coding Club

Sreyas Institute of Engineering and Technology

Managed organizational tasks, technical tracks, and hackathon execution

2024 – Present

- Organized internal development bootcamps and standardized competitive formats for annual institutional engineering events.
- Expanded registration pools for core technical hackathons by adjusting programmatic scope and handling direct technical community outreach.
